

FaIR ensemble-mean vs observations: GMST and OHC

Global mean surface temperature (rebaselined to 1850-1900)

Ocean heat content (rebaselined to 1981-1996 mean)

FaIR: v1.4.5 841-config posterior with Smith 2024 historical emissions + RFF-SP central draw, ensemble-mean across 10,000 LHS cells. GMST obs: IGCC 2024 (annual mean across HadCRUT5 / NOAA / Berkeley / Kadow) and Berkeley Earth annual. OHC obs: IGCC 2024 / Palmer-vS (1981-2024; FaIR's modern calibration target) and Gouretski 2007 (1953-1996; BRICK's calibration target). Baselines: GMST 1850-1900 (IPCC standard); OHC 1981-1996 (common to all three OHC products).
