

Marginal sea-level rise from a 1 GtCO₂ pulse at 2030: Gaussian summary vs the real distribution

Data: paired BRICK ensemble (LHS-10k importance-weighted (FaIR v1.4.5 + post-PR#93 BRICK), post-PR#93 Wong posterior). Pulse-size-invariant linear regime via 0.01 GtCO₂ companion run, scaled to per-GtCO₂. Years 2020-2150.
